Since the end
of colonization
Africa has

struggled with
socio-
economic and
political
problems.
These
challenges
have attracted
wealthy
donors from
Western
nations and
organizations
that have
assumed the
roles of helper
and deliverer.

While some
donors have
good
intentions,
others seek to
impose their
ideology of
sexual
liberation.
These are the
ideological
neocolonial
masters of the
twenty-first
century who
aggressively
push their

agenda of radical feminism, population control, sexualisation of children, and homosexuality . The author, a native of Nigeria, shows how these donors are masterful at exploiting some of the heaviest burdens and afflictions of Africa such as maternal mortality, unplanned pregnancies, HIV/AIDS pandemic, child marriage, and persistent poverty. This exploitation

has put many African nations in the vulnerable position of receiving funding tied firmly to ideological solutions that are opposed to the cultural views and values of their people. Thus many African nations are put back into the protectorate positions of dependency as new cultural standards conceived in the West are made into core policies in African capitals. This book reveals

the recolonization of Africa that is rarely talked about. Drawing from a broad array of well-sourced materials and documents, it tells the story of foreign aid with strings attached, the story of Africa targeted and recolonized by wealthy, powerful donors. *Big Java* Prentice Hall Make the most of PowerShell's features to manage all aspects of your Exchange Server 2016

Andrew S. Tanenbaums Distributed Operating Systems fulfills this need. Representing a revised and greatly expanded Part II of the best-selling Modern Operating</p>	<p>Systems, it covers the material from the original book, including communication, synchronization, processes, and file systems, and adds new material on distributed shared memory, real-time distributed systems, fault-tolerant distributed systems, and ATM networks. trademark writing provides readers with a thorough, concise treatment of distributed systems. *Spring in Action* SAGE Feminist Political Ecology explores the gendered relations of ecologies, economies and politics in communities as diverse as the rubber tappers in the rainforests of Brazil to activist groups fighting racism in New York City. Women are

often at the centre of these struggles, which concern local knowledge, everyday practice, rights to resources, sustainable development, environmental quality, and social justice. The book bridges the gap between the academic and rural orientation of political ecology and the largely activist and urban focus of environmental justice movements. **Being**

Ethnographic CRC Press Monitoring of public and private sites has increasingly become a very sensitive issue resulting in a patchwork of privacy laws varying from country to country - though all aimed at protecting the privacy of the citizen. It is important to remember, however, that monitoring and visual surveillance capabilities can also be employed to aid the citizen. The focus of current

development is primarily aimed at public and corporate safety applications including the monitoring of railway stations, airports, and inaccessible or dangerous environments. Future research effort, however, has already targeted citizen-oriented applications such as monitoring assistants for the aged and infirm, route-planning and congestion-avoidance tools, and a

range of environmental monitoring applications. The latest generation of surveillance systems has eagerly adopted recent technological developments to produce a fully digital pipeline of digital image acquisition, digital data transmission and digital recording. The resultant surveillance products are highly-flexible, capable of generating forensic-quality imagery, and able to exploit

existing Internet and wide area network services to provide remote monitoring capability. Java: A Beginner's Guide, Sixth Edition Cambridge University Press This volume attempts to keep track of the most recent developments in corpus-based, corpus-driven and corpus-informed studies. It signals the widening scope and perspectives

on language and computers by documenting new developments and explorations in these areas encompassing an array of topics and themes, ranging from national corpora, corpus tools, information and terminology extraction through cognitive processes, discourse and ideology, academic discourse, translation, and lexicography to language

teaching and learning. The contributions are drawn from a selection of papers presented at the 7th Practical Applications in Language and Computers PALC conference held at the University of Łódź in 2009. Pro ASP.NET MVC 5 John Wiley & Sons Making Russians is an innovative study dealing with Russian nationalities policy in Lithuania and Belarus in the aftermath of the 1863 Uprising. The book devotes most attention to imperial confessional

and language policy, for in Russian discourse at that time it was religion and language that were considered to be the most important criteria determining nationality. The account of Russian nationalities policy presented here differs considerably from the assessments usually offered by historians from east-central Europe primarily because the author provides a more subtle description of the aims of imperial nationalities policy, rejecting the claim that the Russian authorities consistently sought to assimilate members of other national groups. At the same time the interpretation this study offers opens a discussion with western and Russian historians, especially those, who lay heavy emphasis on discourse analysis. This study asserts that the rhetoric of officials and certain public campaigners was influenced by a concept of political correctness, which condemned all forms of ethnic denationalisation. A closer look at the implementation of discriminatory policy allows us to discern within Russian imperial policy more attempts to assimilate or otherwise repress the cultures of non-dominant national groups than it is possible to

appreciate simply by analysing discourse alone.

Nominated for the Best contribution to Slavic Linguistics/AA TSEEL book award 2011 The concept of complex emotions is obviously polysemous. On the one hand, we can interpret it as a non-basic, non-prototypical, or culture-

specific notion, on the other - and this is the interpretation we propose in this work - a complex emotion concept can be looked upon as a concept whose complexity emerges in interaction, due to the complex nature of its object. Our interpretation is thus construction-based, one in which meaning is not to be found exclusively in the lexical semantics of

the term, but also in the, clearly meaning-laden, grammatical construction, e.g. a complement clause, expressing the object or cause of the emotion. The construal of a scene mapped on the form of a complex sentence involves the emotion that is unambiguously complex and not necessarily universal or prototypical. We argue throughout this book that cross-

linguistic grammatical mismatches are a visible sign of conceptual and categorization al distinctions between the conceptualization of emotion in different languages and cultures. They also signal differences in what individual speakers consider salient in a portrayed scene. We offer a contrastive corpus-based study of Polish and English emotion concepts and the linguistic

patterns they enter. Our theoretical approach combines lexical semantics and cognitive linguistics and proposes a cognitive corpus linguistics methodology. It is a cognitive linguistic endeavor in which we analyze grammatical category mismatches and provide detailed semantic analyses of different complement choices of emotion predicates.

We also discuss insights into Polish and English cultural values gleaned from the different underlying categorizations of emotions. Combining theoretical analyses with pedagogical theory and classroom applications, this work breaks new ground and will reach audiences of linguists, teachers and students of Polish, teachers and students of English, translators, and other

language researchers and practitioners. *Distributed Operating Systems* University of Michigan Press Presents an instructional guide to SQL which uses humor and simple images to cover such topics as the structure of relational databases, simple and complex queries, creating multiple tables, and protecting important table data. **Helping Friends and**

The functional notion of “topic” or “topicality” has suffered, traditionally, from two distinct drawbacks. First, it has remained largely ill defined or intuitively defined. And second, quite often its definition boiled down to structure-dependent circularity. This volume represents a major departure from past practices, without rejecting both their intuitive appeal and the many good results yielded by them. First, “topic” and “topicality” are re-analyzed as a scalar property, rather than as an either/or discrete prime. Second, the graded property of “topicality” is firmly connected with sensible cognitive notions culled from gestalt psychology, such as

“predictability” or “continuity”. Third, we develop and utilize precise measures and quantified methods by which the property of “topicality” of clausal arguments can be studied in connected discourse, and thus be properly hinged in its rightful context, that of topic identification, maintenance and recoverability in discourse. Fourth, we show that many grammatical

phenomena which used to be studied by linguists in isolation, all partake in one functional domain of grammar, that of topic identification. Finally, we demonstrate the validity of this new approach to the study of “topic” and “topicality” by applying the same text-based quantifying method to a number of typologically-diverse languages, in studying actual texts. Languages studied here

are: Written and spoken English, spoken Spanish, Biblical Hebrew, Amharic, Hausa, Japanese, Chamorro and Ute. *Microsoft Exchange Server 2016 PowerShell Cookbook* Manning Publications
