Biological fluid mechanics, or biofluid mechanics, is the study of both gas and liquid fluid flows in or around biological organisms. An often studied liquid biofluid problem is that of blood flow in the human cardiovascular system. Under certain mathematical circumstances, blood flow can be modeled by the Navier–Stokes equations. Biomechanics - Wikipedia¹. Introduction. Biofluid mechanics describe the kinematics and dynamics of body

fluids in humans, animals and plants. We distinguish between external flow around bodies as in bird flight or the airflow around bodies in air conditioning situation, and internal flow through bodies such as blood flow through blood vessels. An introduction to biofluid mechanics—basic models and ...
